Re: Ontario FIT and Micro-FIT Content Compliance

TO: Whom it may concern

SOLAR MOUNTING SYSTEMS

This will confirm that solar mounting systems including strong-back weldments and all extrusion rails including Channellox rails, rail mounting components (F-Clip), panel clips, or other custom hardware devices made by True North Power NG Inc. are 100% designed and manufactured in Ontario.

SunpointGPS tracker systems, including attachment mechanisms, power supply and all control software as well as critical electronics are 100% designed and assembled in Ayr Ontario. As specified in OPA MicroFIT and FIT content rules, drive components and motors as well as some off-the-shelf electronic components are not required to be made in Ontario.

As a result True North PowerSeries mounts which include SunpointGPS qualify as 100%, Made in Ontario content.
